Wombo Combo Games

Numbo Jumbo
A game about numbers that add up.

Santa Cruz, June 28, 2016 - Wombo Combo Games presents its first mobile game. Numbo Jumbo is an arcade puzzle number game for iOS and Android. It's a game about grouping numbers that add together. For example, '3 5 8' works because 3 + 5 = 8.

The game offers 4 game modes, which cater to various audiences.

'Timed' is a timed mode where the player swipes as many combos as they can within 60 seconds.

'Moves' is a relaxed mode with no time pressure where the player is limited to 20 moves.

'Infinite' is an endless mode with levels that challenges players by introducing larger numbers with each level, while the speed of the game ramps up gradually.

'Stack' is a similarly endless mode without time pressure, where each move causes the game to react by dropping an increasing number of blocks.

The well balanced features, and difficulty level in the game evoke within the player the sense of competition and accomplishment. Players compete versus their own scores as they complete various levels, and they also compete with their friends where they play for bragging rights.

"Just play. Have fun. Enjoy the game." - Michael Jordan

Availability and system requirements: Numbo Jumbo requires a mobile device, such as iPhone, iPad, Android phones and tablets.

Wombo Combo Games, is an independent developer of web and mobile games. Since our founding in 2015, we have been working on our first title, Numbo Jumbo. To learn more visit us online at www.numbojumbo.com
